Measure your performance with five new units on test, from just £54

KŮ

Formula 1 engineering meets industry-first bike design and geometry, with a focus on biomechanics and rider plus bike unity. The result? A triathlon bike, but not as you know it...

TF1

KÚ TF1

From €10,999

From designers Richard McAinsh and Alex Bok comes the first bike under the new Kú Cycle brand. Promised to "change the sport forever", the TF1 has revolutionised bike geometry with industry-first components that focus on reducing drag from the front of the bike.

Inspired by Formula 1 vehicular aerodynamics, the Fork Air Stream Technology reduces frontal bike area, with a high fork and head tube that's tucked between the rider's arms, improving downstream airflow control. For a stronger and more responsive ride, the Steerer Pivot Box moulds the traditional head-tube frame into a closed box with the fork connecting directly to the steerer box.

An emphasis on athletic performance translates to a personalised fork length dependant on the rider's own size. This optimises weight distribution and overall bike fit to encourage "feeling at one with the bike". Also adjustable is the 3D cockpit to ensure best race position.
